AT NEUROLOGICAL ASSOCIATES INC.

Quality EMG backed by complete neurologic care.

Neurological Associates, Inc.
RESULTS THROUGH NEUROSCIENCE • SINCE 1929

Quality EMG by neurologists you already know and trust.

The Department of Neurology at Neurological Associates has been performing EMGs since 1974 and currently performs about 1500 studies per year. Led by William T. Mayr, M.D., a fellowship trained clinical neurophysiology (EMG) specialist, our team of experts is exceptionally suited to perform your patients' EMG, analyze the results, and partner with you to determine the best treatment plan for your patients.

Each EMG is customized to your patient's unique neurologic problem.

An EMG is most valuable when it is part of a complete neurological exam. At the Mid Ohio EMG Center, our neurologists will first examine your patient and take a neurological history. Armed with this background, our neurologists can customize the EMG to address each patient's unique symptoms and situation, making test results more informative. And, our neurologists combine the results with their own clinical expertise to provide answers that fully address the questions that you and your patient may have. Such neurologic expertise is vital, especially when the EMG findings do not fully explain your patient's symptoms.

Our focus is the neurologic health of your patient, not just the EMG.

For the neurologists at the Mid Ohio EMG Center, the EMG is many times only the beginning of a health care relationship with you and your patient. If test results indicate that a patient requires additional neurological assessment and care, the neurologist performing the EMG is well positioned to do so — having already developed a good understanding of the case and a strong rapport with the patient during the test.

When indicated, our neurologists can utilize the multi-disciplinary neuroscience team at Neurological Associates, including neurosurgeons, a pain specialist, EEG, evoked potentials, physical therapy center, MediBack lower back pain program, and an onsite infusion center. You and your patients will have access to an expert team dedicated to working together to provide comprehensive, integrated neuroscience care.

Patients appreciate fewer steps in their evaluation, fewer "unfamiliar faces" and our convenient, singular location for comprehensive neurological care.

For more information or to schedule a test for your patient, please call us at 614/457-4880. And give your patients the expertise they deserve.
